I am an Industrial Designer (**MSc, Integrated Product Design, TU Delft**) specialising in **consumer products and user experiences (UX)**. With **experience in taking ideas from concept to market**, I blend user insight, design strategy, and hands-on development to create products that are both useful and engaging.

Experience

Certikat & EvenUp San Francisco, USA (Remote)	Freelance UX Designer May 2026 - Present
- Improving task completion time and usability for individual and business users by redesigning navigation in a credential management service. - Improving feature validation by defining pilot testing frameworks and establishing quantitative and qualitative success criteria for user feedback.	
Accenture & TU Delft Delft, The Netherlands	Thesis Project Mentorship Feb 2025 - June 2025
- Contributed to the Fixophobia initiative with TU Delft and Accenture Industry X (Formerly Van Berlo), through development of a conversational AI repair assistant to lower barriers for non-experts repairing consumer electronics. - Developed a proof of concept for a modular headphone system combining physical product architecture with AI-assisted repair guidance,focused on improving reparability and enabling end-user self-service.	
Pawtrail Delft, The Netherlands	Co-Founder, UX Designer Sep 2024 - Dec 2025
- Co-founded PawTrail, a startup aimed at reducing stress in international pet transport through real-time tracking for pet owners. - Partnered with three major Dutch pet transport companies to run paid per-trip pilots, validating the service through real international client bookings across the US, Australia, UAE, and South America. - Owned all design aspects - system, UX/UI, branding, and product assets, shaping the blueprint for a cohesive service ecosystem.	
Klynk Hyderabad, India	Industrial Designer Jan 2021 - July 2022
- Led the design and development of Semi, a smart induction cooktop, from concept to a fully functional prototype. - Defined the product’s industrial design, UX, and CMF strategy to create an intuitive experience for novice cooks. - Collaborated with engineering and sourcing teams to develop a manufacturable, cost-effective product. - Designed for production, balancing user needs, technical requirements, and manufacturing constraints. - Planned and coordinated pilot testing to validate usability and guide product improvements. - Created high-fidelity renderings and visualisations for stakeholder presentations and marketing.	
Tata Centre for Technology and Design, IIT Mumbai, India	Design Intern May 2020 - July 2020
- Supported visual design documentation for two Indian grassroots innovations—rural puncture-proof tires and low-cost jaggery production. - Translated field and social impact analysis into actionable design insights to improve relevance and usability within local communities.	

Skills

- Software:** Solidworks, Fusion 360, Rhino 3D, Keyshot, Blender, Photoshop, Illustrator, Premiere pro, Indesign, Figma
- Multimedia skills:** Analogue and digital sketching, cardboard and foam mockups, 3D printing
- AI tools:** Vizcom AI, Midjourney, Botpress, VS Code (AI-Assisted Coding)

Education and Certification

MSc Integrated Product Design	TU Delft	Sep 2023 - Jul 2025
B.Des (Bachelor’s in Design) Product Design	Woxsen School of Arts and Design	Aug 2017 - Aug 2021

Collaborations

Sony Electronics	Design For Repair Elective, TU Delft
Proposed a redesigned Sony WH-1000XM5 concept that improves repairability through a more serviceable product architecture, using disassembly mapping and French Repairability Index (FRI) analysis to identify repair barriers and inform design decisions.	

Visio x Douwe Egberts	Inclusive Design Elective, TU Delft
- Led industrial design within a multidisciplinary team (strategy + UI/UX), designing accessible office coffee machines for visually impaired users. - Directed field studies and user interviews to identify key usability and accessibility barriers in shared office environments. - Translated insights into a co-created inclusive redesign concept to improve usability and accessibility of the coffee machine experience.	

HVC Groep	Advanced Concept Design, TU Delft
Contributed system-level design concepts supporting the Netherlands’ transition to district heating by 2030, enabling more sustainable and energy-efficient heating adoption.	

Palmsens	Advanced Embodiment Design, TU Delft
Developed application-driven design concepts for a programmable biosensor, bridging research and real-world laboratory use cases to enable more usable and adaptable lab systems.
